Tourism Climate Action

How it's going (and what we need to do next)

June 8th 2023

What if our solution to climate

change was more holiday?

"People often angrily deny facts that clash with the narrative "truth" established in their minds.

The only thing that can displace a story is a story"

Tourism Declares a Climate Emergency

We're a collective of **114** travel organisations, companies and professionals who have declared a climate emergency and are coming together to find solutions.

We acknowledge the science stating we have to act now to address this crisis over the next decade.

We accept our responsibility to tell the truth, work together, and help build a new, regenerative tourism industry.

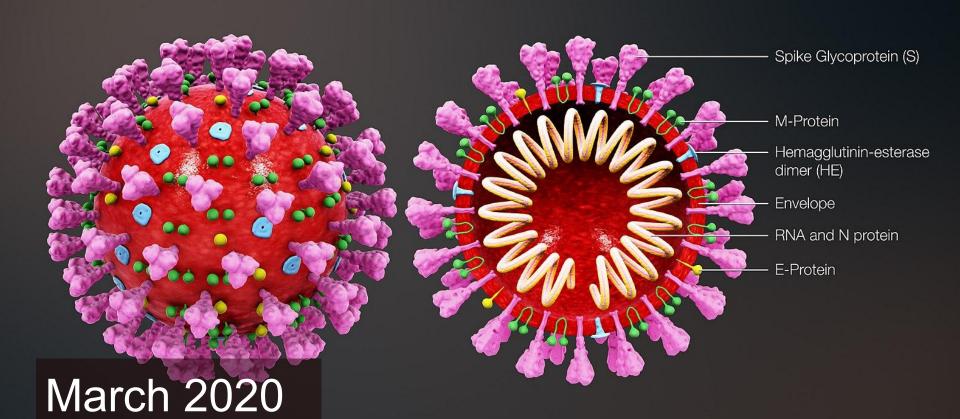

Tourism Declares 5 Commitments

- Declare a Climate Emergency
- Publish a Climate Action Plan
- Make it Real
- Work Together
- Call for Action

EU Commission prepares to crack down on greenwashing with new Green Claims law

() 16 March 2023

PRESS BRIEFING

What is happening?

On 22 March 2023, the European Commission is expected to table the Green Claims Directive (GCD). This much-awaited law aims to crack down on greenwashing by regulating how companies substantiate and communicate their green claims.

If done right, this law, could bring some order in the wild west market environment of green advertising, and help protect EU consumers from misleading claims. For the first time, legislation will oblige companies to make supporting evidence available alongside a green claim.

A leaked legislative proposal from January 2023 indicated that legal obligations would apply to all claims and labels displayed in products, services or companies in both physical and online points of sale across the EU single market. The EEB hopes that such broad scope will be retained in the final proposal, as well as the strong focus on market surveillance.

Besides, the leaked proposal rightly addressed the limitations of the Product Environmental Footprint (PEF) method to provide a complete picture of products sustainability, but failed to set clear common rules for companies across the EU (see below: What to watch out for; key nodes and green NGOs' demands).

Open Air Exercise

Nature Makes You Active

Finnish adults prefer to be physically active in either a genuine or designed natural environment. Natural environments are full of stimuli in addition to encouraging people to engage in physical activity. This is why outdoor exercise can feel less strenuous than indoor sports. A varying terrain also encourages people to walk faster than in urban landscapes.

Many people feel that open air exercise makes them feel healthy and well. The more you move around outdoors, the stronger the well-being effect of nature is. Indeed, it has been noticed that people who move around outdoors are more likely to exercise repeatedly than those who exercise indoors.

Nature is the Best Playground

Compared to indoor environments, meandering paths, rocks, tree stumps and trees naturally encourage children to be more physically active: to climb, jump and run and play freely using their imagination. All of this is
